## LR-N003 Hand Proofer

### Hand Proofer

Each includes the anilox roll,rubber roll and a spring-adjustable mechanically engraved anilox roll.

The Proofer gives you more options for testing on polyethylene,plastic films, paper and paperboard.

Plus, what you see on the proof is what you'll print on press.

### To produce a sample proof

Start with a flat, clean sheet of the stock to be used.

Adjust the anilox roller against the rubber roller by gradually turning the single vernier knob at the base of the hand proofer.

A spring mechanism inside the handle makes it simple to position the rollers to get just the right amount of pressure.

Put 1/2 teaspoon of ink in the nip, rest the rubber roller on the stock, and draw the hand proofer toward you, smoothly and evenly.
